OneStar is an interactive review based map of a restaurant or area. By using the latest Google information based off of their API and the database of restaurants that have received health code violations, we can warn you off of making a bad choice. By culling the good, only the bad remains, and what sort of violations they have regardless of their standing or rating may make you rethink your next dining choice. All of this is overlaid on the map of montreal, giving you a culinary topographic map of all that is rotten. Through this lists only the worst places are pulled and attributed to the locations on our map, creating an in depth heatmap of these infractions so you can see where the real filth is.

technologies used:

Javascript, PHP, SQL/MySQL, Python, HTML/CSS, Bash/Batch
